RFP Mock Questions Document

Question 1: Can the solution enforce adaptive multi-factor authentication based on user risk score?

Question 2: Is integration with third-party HR systems such as Workday or SAP supported?

Question 3: Does the platform allow for delegated administration with granular role-based controls?

Question 4: Can the system provide real-time alerts for suspicious login attempts?

Question 5: Is single sign-on available for both cloud and on-premises applications?

Question 6: Can the platform handle just-in-time user provisioning for external partners?

Question 7: Does the system support compliance with regional data residency requirements?

Question 8: Is there support for passwordless authentication methods like WebAuthn?

Question 9: Can administrators configure fine-grained session timeouts per application?

Question 10: Is audit logging available for all authentication and authorization events?

Question 11: Does the platform offer integration with SIEM tools for centralized monitoring?

Question 12: Can the solution restrict access based on device posture or health checks?

Question 13: Is social login available for consumer-facing applications?

Question 14: Does the system provide automated deprovisioning when employees leave?

Question 15: Is there support for step-up authentication for high-risk transactions?

Question 16: Can administrators enforce location-based access policies?

Question 17: Is integration with third-party identity proofing services possible?

Question 18: Does the platform support high availability with automatic failover?

Question 19: Can the solution scale to millions of users with minimal latency?

Question 20: Is API security managed through OAuth 2.0 and OpenID Connect standards?

Question 21: Can the system provide a centralized dashboard for identity lifecycle management?

Question 22: Is developer support available for building custom authentication flows?

Question 23: Does the platform offer built-in identity analytics for anomaly detection?

Question 24: Is offline access supported for critical applications when internet is unavailable?

Question 25: Can the solution be deployed in a hybrid cloud environment?

Question 26: Is there support for certificate-based authentication?

Question 27: Does the platform allow self-service password reset for end users?

Question 28: Is the system compliant with GDPR and other privacy regulations?

Question 29: Can administrators configure granular API access permissions?

Question 30: Is integration with VPN and network access control systems supported?
